SMART LINK MANIFOLD

RAUTITAN Plumbing

SMART LINK MANIFOLD

Innovative. Compact. Time Saving.

Benefits

- Cost-effective solution for managing water distribution
- Save on material and installation costs
- Simple & easy to install
- PPSU ball valves – corrosion-resistant
- Isolation of individual outlets
- Completely modular for flexibility
- Quick installation time
- Reduced number of fittings
- Central isolation point for the property
- 5 cold water outlets 16-20mm
- 4 hot water outlets 16-20mm

The Smart Link plumbing manifold is an innovative, compact, timesaving and versatile plumbing solution for managing water distribution in a property.

When used in a point to point plumbing configuration, up to **70% fewer joints** are used than compared to traditional branch plumbing.

Point to point plumbing is a method of using the manifold to distribute hot and cold water to appliances in the property using a continuous length of RAUTITAN pipe.

The Smart Link jointing system is the fastest, simplest and most secure manifold jointing method on the market. It only takes a matter of seconds to install and provides visual checking.

The Smart Link manifold boasts 9 individual outlet isolation valves, so additional isolation valves are not necessary – further decreasing the overall install time and cost compared to traditional methods.

It is well-suited for use in utility cupboards where space is a premium as it offers a neat and tidy solution. Its modular design makes it flexible, and can be adapted to suit different spaces and capacity requirements.
